Library and Assets Used:

Tool / Library / Asset	What it does	License Used	Suitability
LibGDX	Game framework and rendering engine	Apache License 2.0	It is fully open and permissive, allowing modification, distribution, and commercial use. Suitable for prototype development and educational purposes.
Tiled Map Editor	Used to design tile-based map layouts	GPL v3 (tool only)	Used offline for content creation. It is not distributed with the code so licensing obligations do not apply
Piskel	Pixel-art editor used to draw sprites used for some assets	Apache License 2.0	It is only a tool. So no redistribution required
'Power Up' Sfx	Plays a sound when the player collects the power up event	CC0	It is released under CC0, meaning it can be freely used, modified, and distributed, including for commercial use, with no attribution required. So suitable for use in the project.

- No external runtime dependencies other than LibGDX are included.
- All other tools were used only for asset creation.
- All licenses are permissive and suitable for an academic or open project.

Unimplemented or Partial Features

Requirement Reference	Feature	Status / Reason
UR_ENDING	Leaderboard being displayed if the player has lost	This wasn't fully defined as a requirement, so we only designed the leaderboard to show if the player has won. It is not necessary for the game and more of a 'would be nice to have' feature.
FR_LEADERBOARD_NAME_INPUT	The leaderboard allows you to enter a previously inputted name to update your score.	Due to the time constraints we didn't have enough time to code this 'perfectly'. However, this again isn't a huge problem as the main functionality of the leaderboard works and this is an edge case. It is a bug that would be fixed in later development.

Everything else has been implemented.
